Purafil Increases Production Capacity by 40 Percent

Efficiency, demand drive manufacturing changes

DORAVILLE, GA—Purafil, Inc. has increased production capacity by 40 percent due to more efficient manufacturing processes and higher demand from customers.

Purafil manufactures gas-phase air filtration systems designed to protect people, electronics, artifacts, and the environment from odorous, toxic, hazardous, and corrosive gases.

The company has upgraded capital resources, hired new employees, and employed Lean Manufacturing principles to improve productivity. Lean thinking has enabled Purafil to standardize sales processes, track replacement orders, reduce manufacturing costs, and increase sales.

Higher demand from the cleanroom, commercial, industrial, preservation, and water-wastewater treatment markets have also prompted Purafil to increase production capacity. Currently, the company maintains nearly 20,000 installations worldwide.

For more information, contact Purafil at (800) 222-6367 or visit the company's Web site: www.purafil.com.
