Odorcarb™ II with Color-Changing Life Indicator Pellets

DORAVILLE, GA—Purafil ESD's new Odorcarb™ II with Media Life Indicator Pellets

(patent-pending) gives the customer a visual indication of remaining life in the impregnated air filtration media. The new Odorcarb II dry-scrubbing media now contains a five percent blend of Media Life Indicator Pellets. As the Odorcarb II media reacts with odorous gases in the airstream, the media life indicator pellets change from blue to white. When the indicator pellets turn completely white, this is the visual indication that the Odorcarb II media is spent and ready for replacement.

Odorcarb II with Media Life Indicator Pellets is patent-pending, UL Classified Class 2, landfill-disposable and is the direct result of ongoing investments in research and development as part of Purafil's ISO 9001:2000 Continual Improvement Program.

Purafil ESD is the leading manufacturer of dry-scrubbing chemical media and scrubbers. A division of Purafil, Inc., Purafil ESD was established in 1987 in response to a growing demand for high-efficiency odor control systems at water and wastewater treatment facilities
